Transparency in Distributed Systems

0xSaad

October 24, 2026

- High performance distributed systems (Parallel - Grid - Cluster - Cloud)
- Distributed Information Systems (Middleware-EAI-TPM)
- Distributed systems for pervasive computing (Ubitiqouis - Mobile - Sensor networks)

1 High performance

1.1 Parallel

Execution unit of CPU is called **core**

2-Cores is Dual-core

4-Cores is Quad-core

Parallel Computing is using multicores processor to perform computations in parallel

1.2 Grid

Have a high degree of heterogeneity

No Assumpations are made for hardware,OS , Networks , And security policies.

1.3 Cluster

Homogeneous

Same OS

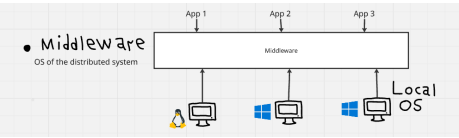

Near-identical software

High level systems connected through LAN (Local Area Network)

2 Distribution Information Systems

2.1 Middleware

OS of the distributed systems

3 Distribution Systems for Pervasive computing

3.1 Ubiquitous Computing System

Pervasive and common

3.2 Mobile Computing System

Pervasive but emphasis is on fact that devices are inherently mobile.

3.3 Sensor networks

Persasive and emphasis on the actual collaborating and sensing of the environment.
